

# SITUATIONAL AWARENESS

**SUBJECT:** Possible Winter Weather Sunday

**SITREP #:** 2026-1.3

**ISSUED:** Friday, January 16, 2026 at 1500

## OVERVIEW

The Office of Emergency Management (OEM) is monitoring the forecast for the possibility of winter weather on Sunday morning. Currently, most models are in good agreement on timing and location of the precipitation. Most models now keep the main area of precipitation well to the south of the metro area. So that's bad news for snow lovers and good news for snow haters.

As described in previous communications, weather models have a hard time predicting this setup, so we do not want to give the full "all clear" on snow chances, but the likelihood is near 0%. Our most likely outcome is no snow at all or light snow flurries (no accumulation).

With all that said, please continue to monitor the weather this weekend, as well as your email for possible changes to the forecast.
